Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 Excerpt: .Twith the same two lines, respectively. With regard to the two circumferences S and T, we should have to point out the same properties that were pointed out as obtaining between the two circumferences S and O. It will be sufficient to indicate the following facts: Since if lies on the parallel circle which is the locus of points with distances from P and P in the ratio DP to DP , the ratio of MP to MP is the same as that of DP to DP ; therefore, the line MD is the bisector of the angle PMP , and it should pass through the mid-point G of tne arc PG P ; then the three points M, D, G are in a straight line; the same is true of the three points D , M, G, as also of G, D, M and of G , M , D . The three points D , G, G are thus the vertices of a triangle the altitudes of which intersect in D and the feet of these perpendiculars are at O, M , and M. Let us construct the angle POI equal to that which the meridian PMP makes with the straight line meridian PP ; the three points P , G, I will be in a straight line, Fig. 31.--Geometrical relations between orthogonal meridians and parallels, second figure. because the angle OP G which subtends the arc PMG upon the circumference T is equal...
